

# 5 STEPS TO INSTALLING PROPANE IN YOUR HOME

## 1 Give Us A Call and Let's Talk

From the phone to your home. The first step of the process is easy, just give us a call and let us know where you reside and what services you're interested in. We build relationships with our customers, so we want to ensure that your local office is the one serving you! Once we have a conversation and learn more about your needs, we can set up an account for you.

## 2 The Scope Out

This is the first step to installation. We check the lay of the land to determine where the tank is best placed and what kind of permits are needed to do so. This will either be a visit by our technicians or photos taken by the new customer and sent to our office.

## 3 The Install

We take care of all steps needed to install the tank. We make all necessary phone calls including requesting a permit if needed and calling the utility to schedule inspections. Additionally, we order any appliances requested for the home, ensuring on-time delivery. Finally, installation typically takes just a single day and your gas turned on the day after. The only thing our customers need to do is be home the day of the installation.

## 4 Gas Delivery

Your first delivery takes place 3-5 days after installation. We fill the tank and ensure your meter for automatic fill (if requested) is functioning properly. With your meter, you never have to worry about checking your tank levels, our system will report your levels for you.

## 5 Sit Back and Relax

That's it! We do our best to make the process of getting propane as easy as possible.

**PROPANE** is the smart choice for your family's comfort and peace of mind.
